

# Systemware JHS

## Effortless Mainframe Job Management

Systemware JHS (Job History System) is your reliable safety net for flawless production and test job runs on IBM zSystems (including z/OS 3.1). In today's fast-paced and competitive business environment, it's essential to meet all service level commitments and keep your end-users working efficiently and your customers happy. With JHS, you can achieve all that and more.

### CONTINUED INNOVATION

Our innovative solution originated as the first-ever automated SYSOUT/SYSLOG management system and has evolved over the last 40 years ensuring that programmers and production control analysts have all the necessary information at their fingertips to manage and recover any job quickly and efficiently. Whether you're looking to improve your IBM zSystems environment's management or create resource efficiency while reducing operational expenses, JHS has you covered.

JHS's powerful search capabilities allow you to search for jobs based on various criteria, including full or partial job names, wild-card characters, start/end times, condition

codes, and destinations. You can access step-level history and detailed job step execution status information, including DD names, step names, PROC step names, CC, CPU time, and more.

JHS also provides easy-to-implement Job Notes and Rules Facility tools allowing for automated operations and providing a more fine-tuned control over your IBM zSystems environment. The Rules Facility monitors all Jobs for exception conditions and automatically performs pre-defined actions for resolution. Global Rules can be applied to all jobs, or step-specific rules can be defined for an individual job step.

### Try JHS For Free

With the 30-day free trial of JHS, you can see how easy mainframe job management can be with our industry-standard tool.

## SCALABLE SOLUTION

JHS offers multi-threaded, concurrent processes for capture and archive, and coupled with the ability to automatically adjust allocated online space for 24/7 availability, JHS provides a truly scalable solution. The system has been architected to manage a single machine or scale to a multi-system environment using the IBM® Parallel Sysplex facility.

## EXTENDED COMPATIBILITY

JHS can be installed as a standalone application or fully integrated with Systemware's intelligent content services platform providing a context-based interface that allows you to research a job that's abended while identifying users impacted by the failed application. Together, JHS and Systemware content services provide for the necessary production control facilities to improve the efficiency, effectiveness, and accuracy of any data center from a modern, browser-based user interface or your trusty 3270 terminal.

## Try JHS Free for 30 Days!

We're so confident that JHS can meet all of your output management needs, we would love to let you try it for free. If you are interested in giving JHS a try, give us a call at 866-533-1514 and we can get you started using JHS today.

## About Systemware

Systemware helps the world's largest and most highly regulated organizations simplify infrastructure, optimize cost, create workflow efficiencies, and meet information governance requirements. Our intelligent content services platform enables users to find and extract information wherever it is stored and transform and deliver it in the exact context needed for each business line. Systemware delivers optimized performance in public, private, hybrid, and IBM zSystems environments, as well as a fully hosted SaaS offering.
